Office Action Summary

Application No.

09/849,093

Applicant(s)

GARG ET AL.

Examiner

Minh Dinh

Art Unit

2132

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-32 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-32 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 04 May 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 5/4/2001.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

DETAILED ACTION

1. Claims 1-32 have been examined.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 10-32 are rejected under 35 U.S.C. 101

Regarding claims 10 and 12-29, the claims are not limited to tangible embodiments. In view of applicant's disclosure, specification page 7, line 12 – page 8, line 4, the medium is not limited to tangible embodiments, instead being defined as including both tangible embodiments (e.g., RAM, ROM, CD-ROM) and intangible embodiments (e.g., wired/wireless networks). As such, the claims are not limited to statutory subject matter and are therefore non-statutory.

Regarding claim 11, it claims a modulated data signal carrying computer executable instructions. The claim is not tangibly embodied and is therefore non-statutory.

Regarding claims 30-32, the claims are rejected because:

- they claim a data structure; however, no functional description language is part of the data structure in the claims. Therefore, the claimed subject matter is nonfunctional descriptive material and is non-statutory.
- the claims are not limited to tangible embodiments. In view of applicant's disclosure, specification page 7, line 12 – page 8, line 4, the medium is not limited

to tangible embodiments, instead being defined as including both tangible embodiments (e.g., RAM, ROM, CD-ROM) and intangible embodiments (e.g., wired/wireless networks). As such, the claims are not limited to statutory subject matter and are therefore non-statutory.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 28-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 28-29 recite the limitation "said dynamic access element" in line 3. There is insufficient antecedent basis for this limitation in the claims. For examination purpose, the limitation is interpreted as "a dynamic access element".

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2132

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Swift (6,308,274).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1, 3-4, 10-15 and 22, Swift discloses a method for dynamically managing access to a resource in a computer system having a client making a request for the resource, the method comprising:

computing a client authorization context after the request for the resource is received from the client (col. 4, lines 46-55);

determining, via an application programming interface, based upon dynamic data and first dynamic policy whether the client authorization context is to be updated, wherein said first dynamic policy is tailored to an application through which the resource is accessed (col. 6, line 5 – col. 7, line 35);

updating the client authorization context according to said determination (col. 6, line 5 – col. 7, line 35);

comparing the client authorization context to at least one access control entry of an access control list (col. 7, lines 51-61);

identifying an access control entry as an access control entry of type allow and when the allow access control entry applies in access evaluation, dynamic access check using dynamic data is automatically invoked (col. 5, lines 2-11; col. 7, lines 51-61; col. 11, lines 21-65), the allow access control entry being functionally equivalent to a callback access control entry; and

in response to identifying the access control entry as a callback access control entry, evaluating, via said application programming interface, based upon the dynamic data and the second dynamic policy whether said allow access control entry bears on said access request, wherein said second dynamic policy is tailored to said application (col. 5, lines 2-11; col. 7, lines 51-61; col. 11, lines 21-65).

Regarding claim 2, Swift further discloses that the first dynamic policy defines flexible rules for determining the client authorization context (col. 6, lines 5-27; col. 12, lines) and wherein said second dynamic policy defines flexible rules for purposes of determining access privileges (col. 7, lines 51-61; col. 11, lines 21-65).

Regarding claims 5, 16 and 23, Swift further discloses that the evaluating based upon dynamic data includes invoking an application-defined dynamic access check routine that performs based in part upon dynamic data such as a Boolean expression in the access control list, the Boolean expression indicating a condition for granting access to the resource (col. 11, lines 21-65; col. 12, lines 46-67). Since access is evaluated

Art Unit: 2132

using data in each access control entry, inherently, the Boolean expression is part of the callback access control entry.

Regarding claims 6, 17 and 24, Swift further discloses that the access check routine is invoked automatically when there is a match between an identifier in the client authorization context and an identifier in the callback access control entry (col. 7, lines 51-61; col. 11, lines 21-65).

Regarding claims 7 and 18, Swift further discloses registering with the operating system, which is the resource manager of the computer system, an application-defined routine for determining dynamic groups (col. 6, lines 38-47; col. 12, lines 36-67).

Regarding claims 8 and 19, Swift further discloses an application-defined routine for determining dynamic access checks is performed by the security mechanism in the kernel (col. 11, lines 10-20). Inherently, the routine is registered with the operating system, which is the resource manager of the computer system.

Regarding claims 9, 21 and 25, Swift further discloses that the evaluating based upon dynamic data and second dynamic policy supplements a determination of access rights based upon static data and policy (col. 11, lines 38-56).

Regarding claim 20, Swift further discloses comparing data to a client authorization context determined based upon static data and policy before determining whether the client authorization context is to be updated (col. 7, lines 5-22; col. 8, lines 8-17).

Regarding claim 26, Swift discloses for an application in a computer system having a resource manager that manages and controls access to a resource, carrying

Art Unit: 2132

out a dynamic authorization callback mechanism that provides extensible support for application-defined business rules via a set of APIs and DACLS including a dynamic groups element, which enables an application to assign temporary group membership, based on dynamic factors, to a client for the purpose of checking access rights (col. 5, lines 2-28; col. 6, lines 15-27; col. 7, lines 5-22; col. 8, lines 30-60; col. 11, lines 10-56).

Regarding claim 27, Swift further discloses a dynamic access check element, which enables an application to perform dynamic access checks, via DACLS and APIs, said dynamic access checks being customized to the application (col. 13, lines 20-56).

Regarding claim 28, Swift further discloses that the dynamic groups element and a dynamic access element are performed at the operating system level (col. 13, lines 20-56). Inherently the elements are registered with the operating system which is the resource manager of the computer system.

Regarding claim 29, Swift further discloses that the dynamic groups element and a dynamic access element utilize dynamic data related to client operation (col. 12, lines 46-59; col. 13, lines 20-43).

Regarding claim 30, Swift discloses a data structure stored on a computer storage medium for use in connection with dynamic access check determinations for an application in a computer system, the data structure comprising: an identifier identifying the data structure as an allow access control entry (col. 5, lines 2-11). Swift discloses that when a deny access control entry applies, no further testing is necessary but when an allow access control entry applies, dynamic access check using dynamic data is automatically invoked (col. 5, lines 2-11; col. 7, lines 51-61; col. 11, lines 21-65);

Art Unit: 2132

therefore, the allow access control entry meets the limitation of a callback access control entry.

Swift discloses storing in an access control list dynamic authorization policy data in a format tailored to the application (col. 11, lines 47-56; col. 12, lines 36-67). Since the dynamic authorization policy data indicates an allowable condition, inherently, it is part of the allow access control entry.

Regarding claim 31, Swift further discloses that the data structure comprises a security identifier (fig. 5, element 80; col. 5, lines 2-11).

Regarding claim 32, Swift further discloses that the data structure comprises a list of access permissions (fig. 5, element 80; col. 5, lines 2-11).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 5,321,841 to East et al.

U.S. Patent No. 6,366,913 to Fidler, Jr. et al.

U.S. Patent No. 6,412,070 to Van Dyke et al.
